Beyond Matching: OTHERS, Directional Weak-Evidence Scoring, and Reputational Intelligence

Sizhe Tan & GPT-Obot | 16 October 2026 | Research foundation | Apache-2.0

Central research question

How can intelligent systems evaluate consequential signals that do not yet fit formal feature matching or conventional distance metrics, without confusing evidence, perspective, and decision authority?

Core idea and proposed architecture

FORMAL MATCHING	OTHERS EVIDENCE	DIRECTIONAL SAILS	GOVERNED GROWTH
Known features and explicit distance measures	Contextual, relational, reputational and anomalous signals	Perspective-sensitive weak-evidence evaluation	Counter-evidence, audit, structural promotion

Eight research papers

BM-001 Beyond Matching and the Limits of Distance Scoring

BM-002 OTHERS as an Open Evidence Space

BM-003 Directional Measurement Sails and Weak-Evidence Scoring

BM-004 Reputational Intelligence and Collective Weak Signals

BM-005 Perspective Distance and Competitive Action Scoring

BM-006 From OTHERS to Open Structural Scoring Growth

BM-007 Counter-Evidence, Provenance, and Scoring Governance

BM-008 Unified Architecture, Research Agenda, and Validation

Research status and validation

Version 1.0.0 presents conceptual and algorithmic proposals, not established performance gains. Planned validation includes matched baselines, ablation studies, calibration, source-dependence tests, robustness against manipulation, and governance audits. The proposed growth cycle is Capture → Sense → Propose → Challenge → Promote → Reassess.
